Click on the Cached link to view Google's cached version of the page with the query terms highlighted. The cached version also indicates terms that appear only on links pointing to the page and not on the page itself. When Google displays the cached page, a header at the top serves as a reminder that what you see isn't necessarily the most recent version of the page.

A recursive sequence $\{f(n)\}_n$, also known as a recurrence sequence, is a sequence of numbers $f(n)$ indexed by an integer n and generated by solving a recurrence equation. The terms of a recursive sequences can be denoted symbolically in a number of different notations, such as f_n , $f(n)$, or $f[n]$, where f is a symbol representing the sequence.

Recursive Sequence -- from Wolfram MathWorld

Jetty has a CacheControl parameter (can be specified webdefault.xml) that determines the caching behavior of clients (by affecting headers sent to clients).. Does Tomcat has a similar option? In short, I want to turn off caching of all pages delivered by a tomcat server and/or by a specific webapp?

An empty Bloom filter is a bit array of m bits, all set to 0. There must also be k different hash functions defined, each of which maps or hashes some set element to one of the m array positions, generating a uniform random distribution. Typically, k is a constant, much smaller than m , which is proportional to the number of elements to be added; the precise choice of k and the constant of ...

There's a different reason why you should forward to your ISP DNS servers... you'll look like an ordinary client to them. If you don't and they see you have a system that's sending DNS queries all over the world, they're going to assume you're running a DNS server and might just throw a firewall rule in your face and hose you.
