Matching pennies is the name for a simple game used in game theory. It is played between two players, Even and Odd. Each player has a penny and must secretly turn the penny to heads or tails. The players then reveal their choices simultaneously. If the pennies match (both heads or both tails), then Even keeps both pennies, so wins one from Odd (+1 for Even, -1 for Odd).

Basically there are two parts to this project. The first part is setting up the ESP8266 hardware to read the soil moisture sensor output. The second part involves creating a Google sheet and configuring it to accept the sensor data sent by the ESP8266 module over the internet using a Google App Script that is provided with this tutorial.

Make the turntable: Slide the pencil through the center hole of the record so the tip extends an inch or so (a few cm) beyond the other side. Angle the pencil so it is perpendicular to the record, then position the assembly so the record lies horizontal and the pencil shaft is vertical, with the tip of the pencil pointing down towards the table and the eraser end pointing up towards the ceiling.
