Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

Epigenetics is the study of heritable phenotype changes that do not involve alterations in the DNA sequence. The Greek prefix epi-(ἐπι-"over, outside of, around") in epigenetics implies features that are "on top of" or "in addition to" the traditional genetic basis for inheritance. Epigenetics most often denotes changes that affect gene activity and expression, but can also be used to ...

In the fall of 2005, in a special issue of Nature devoted to chimpanzees, researchers reported the draft sequence of the chimpanzee genome.² At the time, some researchers called it "the most dramatic confirmation yet"³ of Darwin's theory that man shared a common ancestor with the apes. One headline read: "Charles Darwin Was Right and Chimp Gene Map Proves It."⁴

What About the Similarity Between Human and Chimp DNA ...

The content standards presented in this chapter outline what students should know, understand, and be able to do in natural science. The content standards are a complete set of outcomes for students; they do not prescribe a curriculum. These standards were designed and developed as one component of ...

Searching for Answers in the DNA. In theory, a genetic marker can be any type of biomolecule or assay that allows us to "read" inherited differences among individuals in their DNA sequences. Blood groups, protein isozymes, and human leukocyte antigens (HLAs) were among the first developed markers, but even simple traits that are controlled by single genes (e.g., eye color) can also serve ...
