We determined the crystal structure of human erythrocyte catalase in the space group P2₁2₁2₁ with a biological tetramer in the asymmetric unit by using molecular replacement with BLC (Murthy et al., 1981) as a search model. The structure was refined to 2.2 Å resolution with an R_{cryst} of 17.2% and an R_{free} of 22.7%. The electron density is clear for residues from Arg5 to Asn501, and ...

Hydrogen iodide (H I) is a diatomic molecule and hydrogen halide. Aqueous solutions of HI are known as hydroiodic acid or hydriodic acid, a strong acid. Hydrogen iodide and hydroiodic acid are, however, different in that the former is a gas under standard conditions, whereas the other is an aqueous solution of said gas.

Enzyme catalysis is the increase in the rate of a process by a biological molecule, an "enzyme". Most enzymes are proteins, and most such processes are chemical reactions. Within the enzyme, generally catalysis occurs at a localized site, called the active site.. Most enzymes are made

predominantly of proteins, either a single protein chain or many such chains in a multi-subunit complex.

En chimie, l'équation de Henderson-Hasselbalch est une équation donnant le pH d'un système tamponné. Elle est notamment utilisée en physiologie et en médecine pour déterminer le pH sanguin à partir des concentrations en ion bicarbonate et en acide carbonique

The oxidation of cyclohexane under mild conditions is a topic of great interest .Many attempts have been made to substitute the classical process (cyclohexane (ane) conversion of 4% with a concentration of cyclohexanone (one) plus cyclohexanol (ol) of 0.40 mol l⁻¹ after 40 min), by biomimetic systems that can catalyze the selective oxidation of alkanes at room temperature with different ...

Cyclohexane oxidation continues to be a challenge ...

A polar aprotic solvent does not hydrogen bond to nucleophiles to a significant extent, meaning that the nucleophiles have greater freedom in solution. Under these conditions, nucleophilicity correlates well with basicity – and fluoride ion, being the most unstable of the halide ions, reacts fastest with electrophiles.
