A chromosome is a deoxyribonucleic acid molecule with part or all of the genetic material of an organism. Most eukaryotic chromosomes include packaging proteins which, aided by chaperone proteins, bind to and condense the DNA molecule to prevent it from becoming an unmanageable tangle. Chromosomes are normally visible under a light microscope only when the cell is undergoing the metaphase of ...

Cancer growth is a multistage, stochastic evolutionary process. To measure the divergent outcomes of tumors, we teamed up with the Winslow Lab to develop a new method that measures the growth of thousands of tumors within a single mouse using DNA barcodes, termed Tuba-seq. Tuba-seq measures tumor sizes far more precisely and rapidly than previous approaches, and demonstrates the importance of ...

A genealogical DNA test is a DNA-based test which looks at specific locations of a person's genome, in order to find or verify ancestral genealogical relationships or (with lower reliability) to estimate the ethnic mixture of an individual. Since different testing companies use different ethnic reference groups and different matching algorithms, ethnicity estimates and more distant DNA matches ...

The PTTs of normal infants are longer than those of adults due to lower factor levels in the first months of life; the infant reference ranges provided (5 days, 3 months) are based on published literature (Ref: Andrew M et al.
