### **Which region of the earth contains the tectonic plates?**

As the two major plates slowly move away from each other, they allow magma from the deeper layers of the earth to seep up onto the ocean floor, producing new layers of oceanic crust.

### **Major Plates of the Lithosphere: Earth's Tectonic Plates ...**

A Subduction zone is formed when tectonic plates collide. It is a zone where plates of the crust moves across the planet's surface and collide with each other. When two tectonic plates collide at Subduction zone, the one plate bends and goes under the other plate curving down to the hottest layer under the crust that is known as Mantle.

The lithosphere is broken up into what are called tectonic plates—in the case of Earth, there are seven major and many minor plates (see list below). The lithospheric plates ride on the asthenosphere. These plates move in relation to one another at one of three types of plate boundaries: convergent or collision boundaries, divergent or spreading boundaries, and transform boundaries.
