An optical fiber is a flexible, transparent fiber made by drawing glass or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical ...

Rated 5 out of 5 by Wang from Great for Maritime Enforcement In short, these are great optics for maritime enforcement in the urban/marina environment, even in low light conditions. I was also pleased that I could simply put a NV monoscope up to one of the eye pieces or a cell phone camera against it to capture images.
