The human brain is not only one of the most important organs in the human body; it is also the most complex. In the following tour, you will learn about the basic structures that make up the brain as well as how the brain works. This is not an in-depth look at all of the research on the brain (such a resource would fill stacks of books).

A body cavity is any fluid-filled space in a multicellular organism other than those of vessels (such as blood vessels and lymph vessels). The human body cavity normally refers to the ventral body cavity, because it is by far the largest.

**Body cavity - Wikipedia**

Brainstorming is a group creativity technique by which efforts are made to find a conclusion for a specific problem by gathering a list of ideas spontaneously contributed by its members.. In other words, brainstorming is a situation where a group of people meet to generate new ideas and solutions around a specific domain of interest by removing inhibitions.

Piaget theory started out with two main concepts, accommodation, and assimilation. Accommodation is the process of taking new information in one's environment and altering pre-existing information in order to fit in the new information. This is important because it establishes how people are going to take in new concepts, schemas, knowledge, etc.
