In unicellular organisms, the ability of one cell to reproduce itself means the reproduction of a new individual; in multicellular organisms, however, it means growth and regeneration. Multicellular organisms also reproduce in the strict sense of the term—that is, they make copies of themselves in the form of offspring—but they do so in a ...

### **Reproduction | biology | Britannica.com**

I. Cell Division . Life is based on the ability of cells to reproduce, or make copies of themselves. This is done by a process called cell division = one cell divides into two cells.. For one-celled organisms, cell division = reproduction; each cell division not only produces a new cell, it also produces a new organism (bacteria, protists).
