The term deep sea creature refers to organisms that live below the photic zone of the ocean. These creatures must survive in extremely harsh conditions, such as hundreds of bars of pressure, small amounts of oxygen, very little food, no sunlight, and constant, extreme cold. Most creatures have to depend on food floating down from above.. These creatures live in very demanding environments ...

Earth is the third planet from the Sun, and the only astronomical object known to harbor life. According to radiometric dating and other sources of evidence, Earth formed over 4.5 billion years ago. Earth's gravity interacts with other objects in space, especially the Sun and the Moon, Earth's only natural satellite. Earth orbits around the Sun in 365.26 days, a period known as an Earth year.

Earth - Wikipedia

We are embarking on a journey to explore and understand one of our planet's hidden frontiers—the ocean twilight zone. Our project will combine exacting science, innovative technology, and broad engagement to turn knowledge into actions that improve understanding of our planet and how to live sustainably on it.

The Ocean Twilight Zone : Woods Hole Oceanographic Institution

Why is the ocean blue? Believe it or not, no one is really sure why the ocean is blue! As you may know, sunlight, or “white” light, is actually made up of all the colors...
