chapter 10 anatomy and physiology coloring workbook ...

Recall that blood is a connective tissue. Like all connective tissues, it is made up of cellular elements and an extracellular matrix. The cellular elements—referred to as the formed elements—include red blood cells (RBCs), white blood cells (WBCs), and cell fragments called platelets. The extracellular matrix, called plasma, makes blood unique among connective tissues because it is fluid.

anatomy: chapter 10

Step 1 of 1 Erythropoiesis is the process by which erythrocytes are produced. This production increases when blood levels of oxygen begin to decline, especially when this change occurs in the kidneys. This stimulates erythropoietin secretion in the kidneys, which targets the bone marrow to increase red blood cell production.
