For example, if you counted 200 colonies on the 10<sup>-4</sup> plate,  $200 \times 10,000 = 2,000,000$  colonies or  $2 \times 10^6$  viable cells/mL were present in the original sample. Generally replicates of each dilution are plated, and the mean count recorded. Spread Plate Method Another technique for performing a standard plate count is the spread plate method.

enumeration of microbial populations by viable count procedures. The procedure is widely used in marine microbiology where population levels are often low and where viable plate counts are known to severely underestimate total number of bacteria. Typically, the viable count is less than 1% of the direct count for marine samples.
