Calculus Questions, Answers and Solutions

Calculus (from Latin calculus, literally 'small pebble', used for counting and calculations, as on an abacus) is the mathematical study of continuous change, in the same way that geometry is the study of shape and algebra is the study of generalizations of arithmetic operations.. It has two major branches, differential calculus (concerning instantaneous rates of change and slopes of curves ...

Integration in calculus is the idea of taking a generalized area underneath the curve of a function. It is impossible to get an exact area, but you can approximate it with an integral, which is the combination of different measurements of the area under a given curve.

Fractional calculus is a branch of mathematical analysis that studies the several different possibilities of defining real number powers or complex number powers of the differentiation operator $D = ()$, and of the integration operator $J = \int ()$, and developing a calculus for such operators generalizing the classical one.. In this context, the term powers refers to iterative application of a ...

Calculus. In general, "a" calculus is an abstract theory developed in a purely formal way. "The" calculus, more properly called analysis (or real analysis or, in older literature, infinitesimal analysis), is the branch of mathematics studying the rate of change of quantities (which can be interpreted as slopes of curves) and the length, area, and volume of objects.

Mike, architecture major, Summer 2010 This calculus course was very convenient in the sense that it was online and 4 credits without any major prerequisite. But over the summer I took this class while taking another online class and working 40 hours a week. This calculus class is not good for someone who plans on doing too many other things over the summer.
