Ecology; Ecology addresses the full scale of life, from tiny bacteria to processes that span the entire planet. Ecologists study many diverse and complex relations among species, such as predation and pollination. The diversity of life is organized into different habitats, from terrestrial (middle) to aquatic ecosystems.

Ecology - Wikipedia

The term deep sea creature refers to organisms that live below the photic zone of the ocean. These creatures must survive in extremely harsh conditions, such as hundreds of bars of pressure, small amounts of oxygen, very little food, no sunlight, and constant, extreme cold. Most creatures have to depend on food floating down from above.. These creatures live in very demanding environments ...

Deep sea creature - Wikipedia

All living things are closely related to their environment. Any change in one part of an environment, like an increase or decrease of a species of animal or plant, causes a ripple effect of change in through other parts of the environment.

The Köppen Climate Classification System | Resources

And yet as we said, much of the life in the seas exists relatively close to land. Which means it is also close to human beings and their pollution -- including run-off from dirty city drains and from farmlands that use pesticides and artificial fertilizers.
