**Algebra Lesson 9 6 Factoring Trinomials in the Form  $ax^2 + bx + c$** 

This factoring lesson is all about taking expressions apart. The trinomial\_factoring\_practice worksheet lets students work backwards and forwards with various quadratic expressions. Students can build on the discussion from the Launch to analyze the structure of an expression (MP7) and determine how it can be broken into two binomial factors.

The trinomials on the left have the same constants 1, -3, -10 but different arguments. That is the only difference between them. In the first, the argument is  $z$ . In the second, the argument is  $x^4$ . (The square of  $x^4$  is  $x^8$ .) Each quadratic is factored as  $(\text{argument} + 2)(\text{argument} - 5)$ .

These are trinomials that has both the "a" and "c" terms being perfect squares and the middle "b" being twice the product of the first and last term. Therefore, after factoring, you'll get an answer in the form of either  $(a+b)^2$  or  $(a-b)^2$ . There are good examples for you to further practice factoring trinomials.
