In finance and economics, systematic risk (in economics often called aggregate risk or undiversifiable risk) is vulnerability to events which affect aggregate outcomes such as broad market returns, total economy-wide resource holdings, or aggregate income. In many contexts, events like earthquakes and major weather catastrophes pose aggregate risks that affect not only the distribution but ...

Pareto efficiency or Pareto optimality is a state of allocation of resources from which it is impossible to reallocate so as to make any one individual or preference criterion better off without making at least one individual or preference criterion worse off. The concept is named after Vilfredo Pareto (1848-1923), Italian engineer and economist, who used the concept in his studies of ...

Fig. 1. Example of a meshed transmission network and distribution networks with radial structure. The transmission network consists of three nodes in blue (transmission network being restricted to its interface nodes only, N_∞), and each transmission node is the root of a distribution tree with 5 distribution nodes (source: NICTA NESTA test case Coffrin et al.).
