You should always use pathconf or some function like this to get the runtime value about the specified items, as this page said that: . It should be noted, however, that many of the listed limits are not invariant, and at runtime, the value of the limit may differ from those given in this header, for the following reasons:

Filename length limits on linux? - Server Fault

The Linux Documentation Project is working towards developing free, high quality documentation for the Linux operating system. The overall goal of the LDP is to collaborate in all of the issues of Linux documentation.

The Linux Documentation Project

On Linux (and probably most Unix), there is no OS-level DNS caching unless nsd is installed and running. Even then, the DNS caching feature of nsd is disabled by default at least in Debian because it's broken. The practical upshot is that your linux system very very probably does not do any OS-level DNS caching.
