Dissection (from Latin *dissecare* "to cut to pieces"; also called anatomization) is the dismembering of the body of a deceased animal or plant to study its anatomical structure. Autopsy is used in pathology and forensic medicine to determine the cause of death in humans. Less extensive dissection of plants and smaller animals preserved in a formaldehyde solution is typically carried out or ...

Superficial veins are accessible sites for obtaining blood samples or administering intravenous drugs. The medial saphenous vein is a preferred site for venipuncture in the cat. In the dog, the cranial branch of the lateral saphenous vein is the most prominent of the superficial veins. However, because the vein is relatively mobile it is not easy to penetrate.

The heart is a muscular organ about the size of a closed fist that functions as the body's circulatory pump. It takes in deoxygenated blood through the veins and delivers it to the lungs for oxygenation before pumping it into the various arteries (which provide oxygen and nutrients to body tissues by transporting the blood throughout the body).
