Answers to Study Questions - Jones & Bartlett Learning

1. Introduction. Macrophages (Mφs), first described over a century ago by Ellie Metchnikoff, are found in most tissues of the body. Originally proposed by Van Furth to be part of the mononuclear phagocyte system, originating from bone marrow (BM) derived monocytes, it is now clear that tissue-resident Mφs are derived during embryogenesis from yolk-sac Mφs and/or fetal liver monocytes , , , , .

Macrophages and lipid metabolism - ScienceDirect

Figure 1. Triglyceride Broken Down into a Monoglyceride A triglyceride molecule (a) breaks down into a monoglyceride (b). Lipid metabolism begins in the intestine where ingested triglycerides are broken down into smaller chain fatty acids and subsequently into monoglyceride molecules (see Figure 1b) by pancreatic lipases, enzymes that break down fats after they are emulsified by bile salts.
