Year 11 lesson to introduce students to calculating concentration then using this in titration calculations. My students had carried out titration practical previous to this lesson so had obtained average titre values. Differentiated lesson resources avai...

Titration calculations by salreid | Teaching Resources

R f values are calculated by looking at the distance each component travels on the chromatography paper compared to the distance traveled by the solvent front. This ratio will be different for each component due to its unique chemical properties. When measuring the distance the component traveled, you should measure from the origin (where the middle of the spot originally was) and then to the ...
