"Lock and key" model. To explain the observed specificity of enzymes, in 1894 Emil Fischer proposed that both the enzyme and the substrate possess specific complementary geometric shapes that fit exactly into one another. This is often referred to as "the lock and key" model.: 8.3.2 This early model explains enzyme specificity, but fails to explain the stabilization of the transition state ...

What are Compound Words? Compound words are made by joining two or more words; the combination creates a new word. They can be formed using two nouns, e.g. basketball, two non-nouns, e.g. blowup, or a noun and non-noun, e.g. sunrise. It is important to note that the words do not always keep their original meaning, [...]
