Gravity attracts matter to matter, but there is no force that causes gravity. Gravity itself is one of the four fundamental forces, and it cannot be explained. All scientists know is that gravity occurs; they have been working on a reason for centuries. I hope that wasn't more of a let-down than an answer to you lol :) And I hope I helped.

What force causes Gravity? Question for Physics Teachers ...

Conversely, every time that we have been able to measure the gravity around some matter, we've found that the gravity is there and again Newton's law accurately predicts its strength. Thus, we advance the theory that matter causes gravity and that Newton's law is a good description of how the two are related.

The constant out front we need depends on details of how matter is distributed in the object. For example, a sphere of uniform density would have a constant of $3/5$. For the Earth, the Gravitational Binding Energy is about 2×10^{32} Joules, or about 12 days of the Sun's total energy output!

Lecture 4: Matter & Gravity - Department of Astronomy

However, in the early universe, matter was closer together and the effects of gravity caused the expansion of the universe to slow down. About 5 billion years ago, the density of matter (both normal matter and dark matter), which had been decreasing since the Big Bang , became low enough that the dark energy was able to start accelerating the ...

Gravity Background Information for Teachers, Parents and Caregivers. Remind children that mass and weight are not the same measure. Weight is a measure of how much gravity pulls on an object. Mass is the amount of matter an object has. On the Moon, gravity's pull isn't as strong as it is on Earth.

When we heard that Stitch Fix was waiving the first-time styling fee for teachers, we were curious how it would work. Could a stylist really understand the up-and-down, grubby-handprints-on-your-leg, glitter-all-over-the-table life of a teacher? We wanted to find out, so we found ten teachers and WeAreTeachers staff members willing to try it and share their Stitch Fix reviews with us.

A Matter of Considerable GravityA Matter of Considerable Gravity. Any two objects in orbit around each other are actually in orbit around an invisible point called the center of mass, or barycenter. Jupiter is the only planet for which this barycenter is outside the radius of the sun. The traditional picture of the planets in an ordered parade around their star is much more complex.
