Temperate forests are found in the eastern 1/3rd of North America, in western Europe, in China, Korea, Japan and Australia (although the Australian forest is very different). There is also a bit down in the southern tip of South America. Note that the forest is shifted to the north in Europe; this is a result of the warmer temperatures there as a result of the Atlantic Conveyor (an extension ...

After the Fukushima disaster, Kiko became very concerned ...

Ecology; Ecology addresses the full scale of life, from tiny bacteria to processes that span the entire planet. Ecologists study many diverse and complex relations among species, such as predation and pollination. The diversity of life is organized into different habitats, from terrestrial (middle) to aquatic ecosystems.

Ecology - Wikipedia

What is ecosystem science? Ecosystem science is the study of inter-relationships among the living organisms, physical features, bio-chemical processes, natural phenomena, and human activities in ecological communities.

39,591 Questions Asked In Ecosystems - Answers

Rain is liquid water in the form of droplets that have condensed from atmospheric water vapor and then become heavy enough to fall under gravity. Rain is a major component of the water cycle and is responsible for depositing most of the fresh water on the Earth. It provides suitable conditions for many types of ecosystems, as well as water for hydroelectric power plants and crop irrigation.
