Synesthesia is a perceptual phenomenon in which stimulation of one sensory or cognitive pathway leads to automatic, involuntary experiences in a second sensory or cognitive pathway. People who report a lifelong history of such experiences are known as synesthetes.. The term is from the Ancient Greek σύν syn, "together", and αἴσθησις aisthēsis, "sensation".

The brain is an organ that serves as the center of the nervous system in all vertebrate and most invertebrate animals. The brain is located in the head, usually close to the sensory organs for senses such as vision. The brain is the most complex organ in a vertebrate's body. In a human, the cerebral cortex contains approximately 14–16 billion neurons, and the estimated number of neurons in ...

In a chemical reaction, one or more reactants are transformed into products: reactants → products. The purpose of a chemical equation is to express this relation in terms of the formulas of the actual reactants and products that define a particular chemical change. For example, the reaction of mercury with oxygen to produce mercuric oxide would be expressed by the equation

April 23, 2019. The Raleigh ALS Walk this weekend just prompted me to send a quick update. It is hard to believe this is our 4th walk. Yes, at times I get frustrated with my mobility but in Nov 2015 upon diagnosis if someone would have said I would still be on my feet in April of 2019, I would have taken it in a heartbeat.
