Blood sugar chart by age - Doctors answer your questions

The hematocrit (/ h ɪ ' m æ t ə k r ɪ t /) (Ht or HCT), also known by several other names, is a blood test that measures the volume percentage (vol%) of red blood cells in blood. The measurement depends on the number and size of red blood cells. It is normally 40.7% to 50.3% for men and 36.1% to 44.3% for women. It is a part of a person's complete blood count results, along with hemoglobin ...

Hematocrit - Wikipedia

Under the common ABO blood typing process, a person's blood type could be A, B, AB or O. It is very important for people to know their own blood type, as well as that of their spouse and children. Important decisions concerning emergency blood transfusions may have to be made quickly, so having this information on hand for medical professionals can shave precious minutes off the initial triage ...

What Determines what Blood Type a Person Has? (with pictures)

A: That has to be frustrating for you, but there may be an explanation and a solution. The fatigue you feel soon after eating could be caused by postprandial hyperglycemia, or a "spike" in blood sugar soon after eating. It is common for the blood sugar to rise modestly after meals and then return back toward normal within an hour or two.
