In the Mini-Lesson, students are shown two triangles and asked when to use the Pythagorean theorem or trigonometric ratios in order to find the value of a variable (MP7). In the first triangle, the lengths of two sides are given and students have to find the length of the third side and in the second triangle, the length of one side and the measure of one angle are given.

The remainder of the lesson focuses on the trig ratios found on the two special triangles 30-60-90 and 45-45-90 (Math Practice 7). One of the Pre-Calculus teachers at my school told me that one of the best things that students could bring to his class would be a larger understanding of trig, particularly as it relates to 45-45-90 and 30-60-90 triangles.
