Biology Viruses Review Packet Answers

The life cycle of these viruses can be activated under certain conditions, causing the synthesis of viral proteins to begin, and producing new copies. The virus that causes herpes (herpes virus) is an example of a virus that stays in an inactive state and is sometimes activated.

Viruses Review - Biology Questions

Explain how viruses cause infection. Lesson Summary The Discovery of Viruses In 1935, the American biochemist Wendell Stanley isolated a virus for the first time. A virus is a particle made of nucleic acid, protein, and, in some cases, lipids. A typical virus is composed of a core of DNA or RNA surrounded by a protein coat called a capsid.
