I would like to disable scrolling on the HTML body completely. I have tried the following options: overflow: hidden; (not working, did not disable scrolling, it just hid the scrollbar) position: fixed; (this worked, but it scrolled completely to the top, which is unacceptable for this specific application) I was unable to find any alternatives to these two options, are there any more?

There's a decent enough explanation on the vmware knowledge-base article that you've included above as to what's going on and what to do. Beyond that, none of us can tell you what precisely how to do it for your laptop because this is going to be something that's specific to the BIOS in your computer rather than some standard we can rattle off for you that will work everywhere.
