In mathematics, a linear combination is an expression constructed from a set of terms by multiplying each term by a constant and adding the results (e.g. a linear combination of x and y would be any expression of the form $ax + by$, where a and b are constants). The concept of linear combinations is central to linear algebra and related fields of mathematics. . Most of this article deals with ...

Singular Value. There are two types of singular values, one in the context of elliptic integrals, and the other in linear algebra. For a square matrix, the square roots of the eigenvalues of , where is the conjugate transpose, are called singular values (Marcus and Minc 1992, p. 69).The so-called

In linear algebra, it is common to apply both the complex conjugate and transpose to the same matrix. The matrix obtained from a given matrix by this combined operation is commonly called the conjugate transpose of .However, the terms adjoint matrix, adjugate matrix, Hermitian conjugate, and Hermitian adjoint are also used, as are the notations and .
