In linear algebra, the rank of a matrix is the dimension of the vector space generated (or spanned) by its columns. This corresponds to the maximal number of linearly independent columns of .This, in turn, is identical to the dimension of the space spanned by its rows. Rank is thus a measure of the "nondegenerateness" of the system of linear equations and linear transformation encoded by .

Chapter 1 LINEAR EQUATIONS 1.1 Introduction to linear equations A linear equation in n unknowns $x_1, x_2, \cdots, x_n$ is an equation of the form $a_1x_1 + a_2x_2 + \cdots + a_nx_n = b$, where $a_1, a_2, ..., a_n, b$ are given real numbers. For example, with x and y instead of x_1 and x_2, the linear equation $2x+3y = 6$ describes the line passing through the points (3, 0) and (0, 2).
