What you've run into is called "shadowing". You've created an object in some namespace (either the global namespace of your module, or the local namespace of a function) that has the same name as a the builtin dict type. This prevents you from accessing the builtin dict in the usual way.. You can still get to it, with a bit more effort. The builtins (or __builtin__ in Python 2) module holds ...

python - Tricky : 'dict' object is not callable - Stack ...

Open questions Mathematics is something of an extreme case. In most other sciences, new theories and ideas tend to replace older ones. Hence in most sciences work that was done long ago (exactly how long depending on the particular science) is usually superceded by work done as recently as a few decades ago, or less.

We had a party at a winery and she got drunk. My boss asked me if I can take her home. However, his wife made a pass at me in my car. She told me that I am really hot and started feeling me up and kissing me. Anyways, we had sex and then I took her home. I am going back to work tomorrow and I'm not sure if his wife kept her mouth shut. What should I do?
