Linear And Nonlinear Programming Solution
In mathematics, nonlinear programming (NLP) is the process of solving an optimization problem where some of the constraints or the objective function are nonlinear.An optimization problem is one of calculation of the extrema (maxima, minima or stationary points) of an objective function over a set of unknown real variables and conditional to the satisfaction of a system of equalities and ...

NONLINEAR PROGRAMMING min x∈X f(x), where • f: n → is a continuous (and usually differ-entiable) function of n variables • X = nor X is a subset of with a "continu- ous" character. • If X = n, the problem is called unconstrained • If f is linear and X is polyhedral, the problem is a linear programming problem. Otherwise it is a nonlinear programming problem

Linear Programming Linear programming is often a favorite topic for both professors and students. The ability to introduce LP using a graphical approach, the relative ease of the solution method, the widespread availability of LP software packages, and the wide range of applications make LP accessible even to students with relatively weak mathematical backgrounds.
