In the last chapter we learned that deep neural networks are often much harder to train than shallow neural networks. That's unfortunate, since we have good reason to believe that if we could

train deep nets they'd be much more powerful than shallow nets. But while the news from the last chapter is discouraging, we won't let it stop us.

Neural networks and deep learning

We need to avoid algorithmic bias to be able to reduce discrimination instead of increasing it. We also need to learn to be critical about what we see, as seeing is no longer the same as believing – and develop AI methods that help us detect fraud rather than just making it easier to fabricate more real-looking falsehoods.

Summary - Elements of AI
